

COMATRA LED Sprayer Boom Lighting

FAST - EASY - RELIABLE

"The Comatra CMTX-V10 Blue LED sprayer boom lighting"

Studies show there are many benefits of crop spraying at night:

- At night there is less wind and spray drift.
- Chemicals evaporate slower in the dark.
- Plants are less stressed in the dark.
- Some insects only come out at night.

The **Comatra CMTXV10 Blue LED** is specially designed for crop spraying equipment ensuring a perfect illumination of the nozzles and spray pattern while also providing a much higher contrast than any other traditional white light or blue lens light.

An accurate and proper sprayer boom illumination will enable you to see and monitor the nozzles and spray pattern from the cab.

Properly functioning nozzles are imperative when crop spraying at night !

Comatra Blue Crop Sprayer LED lights have a much lower investment cost, require less installation time and are much easier and quicker to clean. (Compared to individual nozzle lights.)
Saving you time and money all along the sprayer boom !
